VDP specialist enhances ability after India's first Miyokoshi buy

By Sachin Shardul

Navi Mumbai-based Kiran Business Forms Print (KBFPPL), one of India's largest colour variable data printers, uses Miyakoshi MJP600 and Kodak's Versamark to provide variable data print in colour. Miyakoshi is the first digital inkjet press in South East Asia.

Kiran Mohta, director at KBFPPL, said: "Each page can be printed uniquely with variable colours and data on the fly."

Kiran Business Forms Print prints eighteen lakh impressions per day. The printing is supported by solid post-press equipment which consists of two German sheeter, four German inserters, one automatic inland forming machine and a German automatic envelope making machine.

Mohta: "printing eighteen lakh impressions per day"

Mohta said: "We have invested in fully automatic post-press equipment. This enables us to produce quality work at faster speed. The inserter is the fastest in its category. It has an operational speed of 15,000 inserts per hour. The post-press equipment complements the printing machines."

Mohta added: "We have invested in fully automatic equipment as we have large orders. We cannot take chances by taking using manual process, thus using automation we achieve 100% accuracy, better TAT (turn around time), customer delight and error free operations."

Besides printing, KBFPPL also provides mailing services. The colour variable data printing firm is authorised by India Post. For this Kiran has invested in five franking machines and has an onsite post office.

Mohta said: "We cannot afford to say no for anything. If the clients want us to provide the mailing services then we are in position to provide the same pan India. The packed envelopes are segregated as per their destination and then they are sent to the GPO."

Inkjet India 2011 event a success

By Tanvi Parekh

The organisers of the second Inkjet India 2011 termed the conference a huge success, announcing that with 210 delegates from India and overseas, it was three time bigger than the inaugural conference held last year.

The two-day conference was held on 18-19 November in Mumbai.

"We are delighted with the strength of the participation," said Aditya Chandavarkar, the CEO of Inkjet Form India, the organiser. "The conference showcased 13 presentations and interactive panel discussions covering topics like ceramic inkjet printing, UV inkjet technology, printer electronics, RIP software and a full focus day on digital textile printing equipment and inks."

Inkjet Forum India is an initiative of Vasai-based Silversheen Inks & Coatings.

VDP specialists I

The shopfloor is busier than before for this ten-year old colour VDP firm in Navi Mumbai which i

Kiran Mohta is super busy these days. The director of Navi Mumbai based Kiran Business Forms Print (KBFPPL) is currently in the middle of what he describes as the company's busiest time of the year and both he and his company appear to be firing on all cylinders.

The digital printer specialises in full colour variable data printing of banking statements, mutual fund statements, loyalty programs, government statutory statements and transactional printing of credit card statement, utility bills and telephone bills for banks, telecom companies and FMCGs, a market that, according to Mohta, heats up around this time of the year.

It's a good thing, then, that the company's recent kit investments means it can output more than 18 lakh impressions on its Miyakoshi MJP600 and Kodak Versamark digital web printing press. It is this sort of production capability that should help the firm meet its stated aim of breaking the targeted turnover barrier by the end of the year.

KBFPPL's journey began in 2002, when Kamal Mohta, along his son Kiran Mohta, set up the company to work in the digital print segment. We had plans and were ambitious, so we set out to make those ideas happen," says Mohta.

Team Kiran: aiming to hit the 100% efficiency mark

Invest to innovate

Investment has always been central to the firm's strategy. KBFPPL, one of India's largest colour variable data printers invested in South East Asia's first Miyokoshi MJP600 digital inkjet press.

Kiran Mohta, director at KBFPPL, said: "Each page can be printed uniquely with variable colours and data on the fly. Some of our clients have been blown away by the image quality and are already using our services for more variable data printing requirements with value addition."

He adds that the new kit gives the printer the ability to explore new markets. Variable data printing was something the company was particularly concentrating on, anticipating that it would help the company grow its colour business.

Kamal Mohta: "Investment is a crucial part of our strategy"

"we see personalisation as the next stage to build on that extra capacity."
Kamal Mohta

With the additional colour line power, the company is also looking to implement new shift patterns, moving to 24/7 in order to cater for the increased workload.

Mohta says: "But now, with the extra press power of the new machines, we see personalisation as the next stage to build on that extra capacity."

Mohta believes the business is well positioned to grow. "The high-end colour digital market is definitely the place to be, which is where we are now," he says. "Clients' timescales for print jobs are reducing dramatically due to the pressures in their workplace."
