VDP specialist enhances ability after India's first Miyokoshi buy

By Sachin Shardul

Navi Mumbai-based Kiran Business Forms Print (KBFPPL), one of India's largest colour variable data printers, uses Miyakoshi MJP600 and Kodak's Versamark to provide variable data print in colour. Miyakoshi is the first digital inkjet press in South East Asia.

Karan Mohta, director at KBFPPL, said: "Each page can be printed uniquely with variable colours and data on the fly."

Kiran Business Forms Print prints eighteen lakh impressions per day. The printing is supported by solid post-press equipment which consists of two German sheeter, four German inserters, one automatic inland forming machine and a German automatic envelope making machine.

Mohta: "printing eighteeen lakh impressions per day"

Mohta said: "We have invested in fully automatic post-press equipment. This enables us to produce quality work at faster speed. The inserter is the fastest in its category. It has an operational speed of 15,000 inserts per hour. The post-press equipment complements the printing machines."

Mohta added: "We have invested in fully automatic equipment as we have large orders. We cannot take chances by taking using manual process, thus using automation we achieve 100% accuracy, better TAT (turn around time), customer delight and error free operations."

Besides printing, KBFPPL also provides mailing services. The colour variable data printing firm is authorised by India Post. For this Kiran has invested in five franking machines and has an onsite post office.

Mohta said: "We cannot afford to say no for anything. If the clients want us to provide the mailing service then we are in position to provide the same pan India. The packed envelopes are segregated as per their destination and then they are sent to the GPO."

Inkjet India 2011 event a success

By Tanvi Parekh

The organisers of the second Inkjet India 2011 termed the conference a huge success, announcing that with 210 delegates from India and overseas, it was three time bigger than the inaugural conference held last year.

The two-day conference was held on 18-19 November in Mumbai.

"We are delighted with the strength of the participation," said Aditya Chandavarkar, the CEO of Inkjet Form India, the organiser. "The conference showcased 13 presentations and interactive panel discussions covering topics like ceramic inkjet printing, UV inkjet technology, printer electronics, RIP software and a full focus day on digital textile printing equipment and inks."

Inkjet Forum India is an initiative of Vasai-based Silversheen Inks & Coatings.
